

LEGAL, AUDIT AND GOVERNMENT E-INVESTIGATORY SUPPORT

Bring In The Experts Who Have Been There.

An audit, a regulatory issue or criminal or civil proceedings can trigger a need to identify, collect, and preserve electronically stored information (ESI). When you or your client has such a need, you want to bring expert help in quickly, because electronically stored information can be difficult to find, assess, and preserve.

You need experts who have broad experience, maintain absolute confidentiality, and understand courts' rules with respect to evidence — both its admissibility and its ability to withstand challenges.

Aurora Security™ combined practices with Withum to bring expertise developed and honed in some of the world's largest and most sophisticated e-Discovery cases, breaches, data leakage, asset identification, intellectual property theft, fraud, hacking, whistle blowing, network wiretaps, including DOJ, FSA, SEC and other matters. We've also provided support in less complex situations, such as data collection and preservation in internal or external misconduct investigations. We've been there — across the board — and we've done it.

Withum CFI/e-Discovery® offers e-Discovery, cyber forensics investigations and an integrated suite of capabilities. We take a comprehensive, three-dimensional approach, making sure that all relevant cross-channel input and multi-disciplinary considerations are taken into account. But more than that, we develop an investigation support work plan with clients to ensure confidentiality and support business continuity, minimizing potential disruptions. Getting the facts is imperative, but the business must also remain operational.

OUR GLOBAL EXPERTS ARE EXPERIENCED IN WORKING ACROSS BORDERS AND CONTINENTS TO SUPPORT THE EFFORTS OF LEGAL COUNSEL, SENIOR CLIENT LEADERSHIP OR OPERATIONAL TEAMS.
