ADDRESSING YOUR INFORMATION SECURITY NEEDS

You Think You're Protected. But Do You Know?

You may think your organization's information is secure. But what if it's not? The fact is, you may be more vulnerable to a malicious attack than you believe.

QUICK READ e3 PULSE

The cyber-landscape today is littered with organizations that have suffered through internally-or externally-caused attacks on their revenue systems, intellectual property, and client data. An attack on key assets can cost you more than money. It can cause damage to your reputation in the eyes of your customers and the public, loss of competitive advantage, regulatory issues, and even a depressed share price. Any organization that's been through even one fairly minor event will agree that the benefits of proactive protection far outweigh their costs.

AURORA SECURITY™ HAVE COMBINED PRACTICES WITH WITHUM TO BRING INFORMATION SECURITY & RISK ID TO HELP YOU BE MORE CONFIDENT THAT YOUR ORGANIZATION'S ASSETS ARE SECURE AND PROTECTED.

Withum Quick Read e³ Pulse™ provides a tactical measurement of your business risk, efficiently and inexpensively. It uses a five-step process to measure your system's risk, based on a limited sample of business or IT assets. You'll receive scored results with potential remedial actions, so you'll know whether your information is safe, and even more important, what to do if it's not.
